

RA03 recursive source audit – Papers 07–12

Scope: German scan witness first, then German TeX/control, then English, Spanish, and Japanese propagation. RA02 hat-nu, P06, and table-page cleanup corrections are carried forward.

Results

- P07–P08: clean structural and source-visible formula/footnote parity.
- P09: patched. German source has 42 source-visible footnotes. English lacked the recursive-definition note; Spanish/Japanese lacked five source-visible notes. RA03 restores them.
- P10: English patched to restore the Hamel linear-basis note. German/Spanish/Japanese already carried it.
- P11–P12: clean structural and source-visible formula/footnote parity.
