

Ernst Steinitz: Reader Guide and Status

Modern LaTeX Editions of Mathematics Manuscripts

June 3, 2026

Scope

This record collects current German modern-Latex transcriptions, English translation drafts, and source witnesses for work by Ernst Steinitz. It is a working author lane, not a final critical edition.

Current reader surface

Year	Work	Status
1894	Configuration construction dissertation opening	German and English through section 7; continuation begins at section 8, “Lineare Constructionen”.
1897	Configurations n_3	German and English reader files.
1899	Modules in algebraic number fields	German and English reader files through the current complete 57-page reconstruction.
1899	Continuity and irrational numbers	German and English reader files.
1901	Abelian groups	German and English reader files.
1905	One-sided-polyhedron paper	Source scan slice only in this record; transcription/translation pending.
1910	Algebraic theory of fields	German and English reader files through sections 1–24.
1911	Rectangular systems and modules in algebraic number fields I	German and English complete for printed pages 328–354.

Follow-up targets

The package notes still flag three useful source/translation follow-ups: the 1906 paper on Euler polyhedron relations, the 1908 paper *Beitraege zur Analysis Situs*, and the 1912 sequel *Rechteckige Systeme und Moduln in algebraischen Zahlkoerpern. II*. The 1905 one-sided-polyhedron source slice is already included and should be the next natural transcription target.

Files

Top-level reader PDFs are named by work, year, language, and status. The ZIP artifact preserves TeX, TXT, source scans, source PDFs, QA render images, checksums, and package notes from the delivered corpus packet.
