

Dirichlet Band II - Round 23 cumulative QA correction

This front matter is inserted so previously compacted or image-only material is not silently propagated as final clean text. No OCR draft or source screenshot is promoted here as a completed transcription or translation.

Flagged items.

XXV. Repair required. The prior German public file was a source facsimile/source locator, and the prior English file was a normalized/main-equation reading translation. Source witnesses are retained; a full formula-level German TeX transcription and complete English expansion remain required.

XXVII. Repair required for the typed original-language track. The prior German public file was image-only facsimile. OCR/text draft material, where present, is retained only as working material and is not promoted as final. The English prose translation is carried as the current English track.

Other Band II items in the R22 cumulative. Carried forward. No targeted compaction flag was found in this pass. Ordinary source-checking still applies; future repair work must keep equations, tables, diagrams, and special signs typed directly rather than replaced by screenshots.

Vol. I continuation. Source staging only in this round. Vol. I Paper I source PDF, page witnesses, and layout text are staged under v1/01/src for the next completed item.

Path policy: compact, human-readable file and folder names are used throughout to avoid Windows path-length failures. Source scans are witnesses, not substitutes for reading text.
