Table Reconstruction Phase V

Human-Facing Critical Table Atlas

This fascicle presents the table layer in a readable order: first the normalized headings and named entries, then leaf coverage, then numerical candidates. A complete diplomatic line register is supplied as a companion PDF and CSV for collation. The public reader uses editorial table and leaf identifiers, not arbitrary scan page labels.

Numerical Candidate Register

The following register lists every row in which a numerical token was extracted. It is a working numerical layer: the diplomatic line remains in the full register, while this table gives the normalized token string and multilingual interpretation slot.

Leaf	Row	Status	Normalized numerical tokens	English interpretation	Chinese interpretation
T00-01	6	Arabic/numeric table line	5	numerical or tabular entry; preserve as diplomatic witness pending cell collation	数值/表格条目; 按外交式见证保留, 待逐格 校勘

Collation Status

The table atlas separates normalized named entries, numerical-token candidates, and the full diplomatic witness. Uncollated witness fragments are not treated as reader-facing table entries; they are retained in the companion full register and structured CSV so that later collation can resolve them against the printed Arabic table leaves.
