English Translation

Kitab Tabaqat al-Umam (The Book of the Categories of Nations) is one of the rare works in which an Arab writer describes the sciences among the nations that preceded his era. Although its author did not reach the level of Abu al-Faraj ibn al-Damimi in his *Fihrist*, he nevertheless collected numerous useful facts that demonstrate his research activity, his desire for knowledge, and his precision in observation. The people of al-Andalus used to boast of him and of the heads of the East.

Among those who knew this book in the East was Abu al-Faraj Grigorius ibn al-'Ibri, for he quoted from it in his *History of the Dynasties* two useful excerpts concerning the Arabs and their sciences. Likewise, al-Hajj Khalifa knew it and mentioned it several times in his *Kashf al-Zunun*: at one point calling it *Ta'rif bi-Tabaqat al-Umam*, and describing it as a small book of great benefit; at another point as *Kitab Tabaqat al-Umam*. These quotations suffice as proof of the esteem and trust the ancients had for this book.

Preface

The manuscript is written in a clear hand resembling Persian script, on thick paper tending toward yellow, and bound with skillful binding in colored gold paper on both sides with a matching tongue as ornament. The manuscript is, in general, fine despite the errors that occurred in it, most of which we were able to correct and have indicated in the notes to our edition.

المؤلف سيرة

ابن رَواها كما تَرجمته وهذه أمره، من الأقل نعلم فلا المؤلف أما عنه: قال الصلة كتاب في بشكوال الثعلبي صاعد بن محمد بن الرحمن عبد بن أحمد بن صاعد محمد أبي عن روي قُرطبة من وأصله القاسم أبي بكينة القاضي واستقضاة وغيرهم، الوقشي الوليد وأبي قاسم بن والفتح حزم بن وإختبار أموره في متحرراً وكان بطليلة النون ذي بن يحيى الأمير الحط على وبالشهادة الحقوق في الواحد الشاهد مع باليمين القضاة والرواية، والدكاء المعرفة أهل من وكان نظره، أيام بذلك وقضي وهو بطليلة وتوفي م ١٠٣٩ هـ ٤٢٠ سنة في بالمريية ولد ١٠٧٠ هـ ٤٦٢ مائة وأربع وستين اثنتين سنة شوال في قاضيها م.م.

Biography of the Author

As for the author, we know no less than what Ibn Bashkuwal narrated in his *Silah*:

“Sa'id ibn Ahmad ibn Abd al-Rahman ibn Muhammad ibn Sa'id al-Taghlabi, the judge with the kunya Abu al-Qasim, originally from Cordoba, transmitted from Abu Muhammad ibn Hazm, al-Fath ibn Qasim, Abu al-Walid al-Waqshi, and others. The amir Yahya ibn Dhi al-Nun appointed him as judge of Tulaytula (Toledo), and he was independent in his affairs and in testing judges by oath along with one witness in lawsuits and by testimony regarding handwriting, and judgments were made accordingly during his tenure. He was a man of knowledge, intelligence, and transmission. He was born in al-Mariyya (Almeria) in 420 AH (1039 CE) and died in Tulaytula while serving as its judge in Shawwal of the year 462 AH (1070 CE).”

Science in India

Because of the distance of India from our lands and the obstacles between us and them, we have not become familiar with them. No portion of their sciences has reached us, nothing has come to us but fragments of their doctrines, and we have heard only a little of their knowledge.

Among the doctrines of the Indians in the science of astrology, three doctrines are famous: the doctrine of *Sindhind*, the doctrine of the *Azij*, and the doctrine of *Arkand*. Only the doctrine of *Sindhind* has reached us in a complete form. It was followed by a group of Muslims, and those who established it were the compilers of astronomical tables (*al-azyāj*), such as Muhammad ibn Ibrahim al-Fazari, Habash ibn Abd Allah al-Baghdadi, Muhammad ibn Musa al-Khwarizmi, al-Husayn ibn Muhammad known as Ibn al-Adami, and others. The interpretation of *Sindhind* is “the Eternal Time” (*al-Dahr al-Dahir*).

[Section]

As for the followers of *Sindhind*, they agree that the duration of the world has no fixed number. Their doctrine is that the planets, their apogees, and their nodes were all gathered at the head of Aries. Since that event, the movements of the planets, apogees, and nodes began. The lower world remained desolate for a long time until the planets, apogees, and nodes dispersed through the zodiac signs. When that happened, the condition of the lower world returned to its first state, and this continues without end according to them.

Science among the Persians

As for the second nation, the Persians: they are a people of towering nobility and exalted glory, the most settled of nations and the noblest in region, and the most prosperous in kings. We know of no nation besides them whose sovereignty endured so long, who had kings that united them and leaders that defended them from those who opposed them, overcame with them those who envied them, and protected their oppressed from their oppressors, and who endured affairs in a way that secured their portion with continuity and permanence and the finest organization.

[On the Arabs and the Non-Arabs]

The most correct opinion on this is that from the beginning of the reign of Kayumars ibn Amim ibn Aladh ibn Sam ibn Nuh (Noah) to the reign of Manushihir the Persian—who is, according to them, Adam the father of mankind, peace be upon him—to the beginning of the reign of Manushihir, the first king of the second *tabaqa* (class) of Persian kings, was about a thousand complete years. From the reign of Manushihir to the beginning of the reign of Kaythubadh ibn Dua, the first king of the third *tabaqa* of Persian kings, was about two hundred years. From the reign of Kaythubadh to the beginning of the reign of the Tribes (*al-Tawa'if*), the fourth *tabaqa* of Persian kings, at the killing of Alexander of Dara ibn Dara, the last king of the third *tabaqa* of Persian kings, was about a thousand years.

Science in Greece

As for the Greeks, they are the people of Palestine, Rome, Constantinople, and the surrounding nations. Their kingdom extended from the shore of the Mediterranean Sea in the East to its shore in the West, and from the far north to the Syrian Sea. Their greatest city was the city of Alexandria. Their state was very ancient and their sciences were many and varied.

The first to discourse on the sciences and wisdom (*hikma*) among them were Thales, Plato, Aristotle, Ptolemy, Galen, Hippocrates, Proclus, Euclid, Nicomachus, Archimedes, and all those attributed to these in the sciences and wisdom. They were the ones who established the principles of the sciences, elucidated them, arranged their parts, and codified their rules, and their compositions on this were in their own language. Then they were translated into Arabic after the *al-Manadhirah* disseminated them and the religious scholars among the Christians in the East adopted them.

Science in Egypt

As for the Copts, they are the people of Upper Egypt. Their sciences were ancient and beneficial, but they did not advance further since the Greeks took them from them in the time of Ptolemy the king who built the city of Alexandria and made it a center for the sciences, gathering scholars from all nations. They took from the Copts their sciences and incorporated into them Greek wisdom, adding to them, refining them, and composing works on them. Among these were the science of astronomy (*'ilm al-hay'a*), the science of the configuration of the planets, the science of causes and remedies (medicine), and other sciences.

Science among the Jews

As for the Jews, they had sciences in their earliest times, in the era of their prophets and kings. But when they left their lands and dispersed into the lands of the non-Arabs and the Arabs, their sciences were lost and forgotten because they were not a people of endurance or perseverance in science. However, they did preserve from the inheritance of the prophets sciences concerning worship (*'ibādāt*), religious laws (*sharā'i*), and monotheism (*tawhīd*). Among their most famous scholars was Musa ibn Maymun (Moses Maimonides) al-Andalusi, who composed works on the science of theology (*kalām*), philosophy (*falsafa*), medicine (*tibb*), and other subjects.

Chapter Seven: Science among the Arabs

العَرَبِيُّ النَّصُّ

العَرَبِيُّ النَّصُّ

العَرَبُ فِي الْعِلْمِ

مِنْهُمْ الْبَادِيَّةُ وَكَانَتْ حَاضِرَةً. وَأُمَّةٌ بَادِيَّةٌ أُمَّةٌ أَمْتَانِ: فَهُمُ الْعَرَبُ وَأَمَّا الْبِلَادُ. فِي وَتَنَقَّلَهُمْ مَعِيشَتُهُمْ لِيَصْغُرَ عَلَيْهِ تَوَاطُبٌ وَلَا بِالْعِلْمِ تَعْنَى لَا وَالنُّجُومِ الطَّبِّ فِي الْجَاهِلِيَّةِ فِي عُلُومٍ لَهُمْ كَانَتْ فَقَدْ الْحَاضِرَةُ وَأَمَّا فِي وَشَرَعَ الْإِسْلَامُ جَاءَ لَمَّا ثُمَّ ذَلِكَ. وَغَيْرِ وَالنَّحْوِ وَالشَّعْرِ وَالسَّحْرِ فِي الْعَرَبِ اجْتَهَدَ وَالْفَلَاحَ لِلنَّجَاةِ سَبَبًا وَجَعَلَهُ عَلَيْهِ وَحَثَّ الْعِلْمَ طَلَبَ حَتَّى الْعَرَبُ بِلُغَةٍ وَتَضْيِيرَهَا الْأُخْرَى الْأُمَمِ مِنْ وَتَقْلِيهَا الْعُلُومَ طَلَبَ وَفَقُنُونِ. عُلُومٍ أَهْلٍ قَلِيلٍ زَمَنِ فِي أَصْبَحُوا

وَالْتَفْسِيرِ وَالْحَدِيثِ وَالْفِقْهِ الْكَلَامِ عِلْمٌ إِلَيْهِ نَشَطُوا مَا أَوَّلَ وَكَانَ وَأَضَافُوا فِيهَا وَصَنَّفُوا فَتَقَلَّوْهَا الْأَوَائِلَ لِعُلُومٍ تَعَرَّضُوا إِنَّهُمْ ثُمَّ النُّجُومِ عِلْمٌ فِي الْعَرَبِ أَشْهَرُ مِنْ وَكَانَ كَثِيرَةً. أَشْيَاءٌ إِلَيْهَا وَابْنُ الرَّازِيِّ الطَّبِّ وَفِي الْفَلَكِيِّ. مَعْشَرُ وَأَبُو وَالْبَتَّانِيُّ الْفَرْغَانِيُّ الْمَجْرُطِيُّ بَطْلِيمُوسُ الْهَيْئَةِ وَفِي رَشْدٍ. وَابْنُ وَالْمَجُوسِيُّ سَيْنَا الْحَوَارِزْمِيُّ الْحَسَبِ الْعِلْمِ وَفِي الطُّوسِيِّ. الدِّينِ وَشَرَفَ وَالْبِثْرُوجِيُّ رَشْدٍ. وَابْنُ سَيْنَا وَابْنُ وَالْفَارَابِيُّ الْكُنْدِيُّ الْفَلَسَفَةِ وَفِي وَالْكَشِّيُّ.

Science among the Arabs

As for the Arabs, they are two nations: a desert nation (*bādiya*) and a settled nation (*hādara*). The desert among them did not concern itself with science nor persevere in it due to the hardship of their livelihood and their movement from land to land. As for the settled people, they had sciences in the Jahili period in medicine (*tibb*), astrology (*nujūm*), magic (*sihr*), poetry (*shi'r*), grammar (*nahw*), and other subjects. Then when Islam came and legislated the pursuit of knowledge, encouraged it, and made it a means of salvation and success, the Arabs strove in seeking the sciences, translating them from other nations, and rendering them into Arabic, until in a short time they became a people of sciences and arts.

The first [sciences] they were active in were theology (*kalām*), jurisprudence (*fiqh*), *hadith*, and Qur'anic exegesis (*tafsir*). Then they turned to the sciences of the ancients (*'ulūm al-awā'il*), translating them, composing works on them, and adding much to them. Among the most famous Arabs in the science of astrology were al-Farghani, al-Battani, and Abu Ma'shar the astronomer. In medicine: al-Razi, Ibn Sina (Avicenna), al-Majusi, and Ibn Rushd (Averroes). In astronomy (*hay'a*): Ptolemy al-Majriti, al-Bitruji (Alpetragius), and Sharaf al-Din al-Tusi. In arithmetic (*hisāb*): al-Khwarizmi and al-Kashshi. In philosophy (*falsafa*): al-Kindi, al-Farabi, Ibn Sina, and Ibn Rushd.
