

SGA 2: Application to the Fundamental Group

Bounded source-aligned working unit — 20 July 2026

Authority and boundary. Corrected French TeX lines 3532–3534; original printed p. 120, source-PDF physical p. 104, and recomposed running p. 96. The preceding proof on lines 3522–3530 and blank line 3531 are excluded. Blank line 3535 and the Corollary 3.8 opening on line 3536 are also excluded. The raw continuation cursor is line 3535 and the next substantive cursor is line 3536. The Latin-1 authority remains byte-exact; the same-edition PDF is manifestation/layout evidence only. Producer source-defect review found no defect or unresolved ambiguity in this bounded unit. Independent review and archive handoff have not been performed; this package is internal and not for release.

Remark 3.7. — *We proved along the way that if $\mathcal{O}_X \rightarrow i_*\mathcal{O}_U$ is an isomorphism, then X is connected if and only if U is connected, and then $\pi_1(U) \rightarrow \pi_1(X)$ is surjective.*
