

Algebra de quantitates hypercomplex

R823-HG-T002: §2

Status: provisional construction test. This is a source-keyed translation experiment, not a native-reviewed standard, not an intelligibility result, and not a completed translation of the R823 volume.

Source boundary. German authority Noether_R823_cum_de.tex, lines 21089–21097. Authority SHA-256 begins EE8955BCF7A2639; exact slice SHA-256 begins 5F58DDE60BB8C34. Every proposition is aligned in the accompanying clause map.

§ 2. Classes de representation

Se pote transformar un representation direct $\mathfrak{D}$ de $\mathfrak{o}$ in T in un representation isomorf $\mathfrak{D}'$ per transformar cata matrice con un matrice regular P . Assi, al elemento c de $\mathfrak{o}$ se associa, in loco de $C \subseteq \mathfrak{D}$, $P^{-1}CP \subseteq P^{-1}\mathfrak{D}P$.

Representationes que se pote transformar un in le altere de iste maniera se nomina *equivalente*.

Tote le representationes equivalente a un representation forma un *classe de representation* (in le fonte: d. D. K.).

Le equivalencia de representationes reciproc se defini del mesme maniera. Representationes reciproc se nomina equivalente si un se pote obtener ex le altere per transformation con un matrice regular. Tote le representationes equivalente a un representation reciproc fix forma un *classe de representationes reciproc*.

Nota editorial de senso

In le terminologia historic del fonte, *matrice regular* significa hic un matrice invertibile. Le forma historic es conservate, ma non es generalisate a altere senso moderne de “regular matrix”. *Equivalente* non es fusionate con *isomorf*: in iste section, equivalencia exige le transformation explicite per un mesme matrice invertibile. Le notation $C \subseteq \mathfrak{D}$ e $P^{-1}CP \subseteq P^{-1}\mathfrak{D}P$ es conservate exactmente del autoritate, sin correction silentiose.

Limites del tranche

Le grammatica e le vocabulario es candidatos de construction. Nulle affirmation de comprehension human o de intelligibilitate marginal es facite. Le proxime unitate del fonte comencia al linea 21099, §3, e non es includite hic.
