

SGA 2: Application to the Fundamental Group

Bounded source-aligned working unit — 20 July 2026

Authority. Corrected French TeX lines 3439–3444; original printed p. 117, physical source-PDF p. 101, and recomposed running p. 93. These locator systems are kept distinct. Blank line 3445 is excluded; the raw cursor is line 3445 and the next substantive cursor is line 3446 (the Corollary 2.6 counter and label). The complete Corollary 2.5 statement, both hypotheses, the functor, covering types, fiber product, and isomorphism were checked directly. The external English candidate is comparison-only.

Corollary 2.5. Suppose that $\mathrm{Lef}(X, Y)$ holds. Then, for every open neighborhood U of Y , the functor

$$\mathbf{Et}(U) \longrightarrow \mathbf{Et}(Y)$$

is fully faithful. Suppose that $\mathrm{Leff}(X, Y)$ holds. Then, for every étale covering R of Y , there are an open neighborhood U of Y and a covering R' of U such that $R' \times_U Y \simeq R$.
